ABSTRACT OF THE DISCLOSURE

The present invention relates to compositions of matter represented by the general formula

$Ln_xLn'_{x'}A_yTi_zCe_{1\text{-}x\text{-}x'\text{-}y\text{-}z}\,O_{2\text{-}\delta}$

wherein Ln is selected from the group consisting of Sm, Gd, Y, and mixtures thereof; Ln' is selected from the group consisting of La, Pr, Nd, Pm, Eu, Tb, Dy, Ho, Er, Tm, Yb, Lu, A is selected from the group consisting of Mg, Ca, Sr and Ba, $0.05 \le x \le 0.25$, $0 \le x' \le 0.25$, $0 \le y \le 0.03$, $0.001 \le z \le 0.03$, $0.05 \le x + x' \le 0.25$, $0.001 \le y + z \le 0.03$, wherein δ is a number which renders the composition of matter charge neutral. The compositions can be formed into sintered bodies suitable for use as solid electrolytes in devices including solid-state oxygen generators. Such sintered bodies have greater than 95% theoretical density at temperatures at or below 1600°C, and can be produced by a solid-state method.
